The screenshot displays the Reality Check interface, which is a tool for verifying information using SerpApi evidence agents. The interface is divided into several sections:

- Header:** Includes the Reality Check logo, a search bar, and a "Demo mode" button.
- Left Sidebar:** Contains navigation links for BUILD (Home, Workflows, Studio, Runs), INSIGHT (Evidence, Watches, Agents & engines, Usage & receipts), and WORKSPACE (Settings, Developer).
- Main Content Area:** Shows a workflow titled "Loan Forward Check" with a status of "Contradicted". The workflow includes several steps: Intent, Advertiser Identity, News Timeline, Web Reputation, App Identity, Review Voice, and Registry. Each step has a green checkmark indicating it was successful.
- Right Sidebar:** Displays an "Event Timeline" and an "Evidence Stream" with various search results and reviews.
- Bottom Section:** A detailed view of the "Do not proceed" verdict. It shows a confidence score of 99 and a breakdown of evidence. The evidence includes: 2 enforcement-related news item(s) in 180 days, 65% of the nearest 100 reviews report harm, and 100 reviews average 2.2 vs 3.8 overall. The verdict is "Do not proceed" because the evidence contradicts the claim.

— THE PROBLEM

Every Indian phone gets the same forwards. Nobody checks them at the moment it matters.

"Instant Personal Loan Rs 50,000 in 5 minutes! **No CIBIL check**, only Aadhaar & PAN. Download the app now."

Loan forward · WhatsApp

"This stock will double by Diwali. **Guaranteed returns**, join our premium group."

Stock tip · Telegram

"Work from home, Rs 3,000 a day. Pay a **small registration fee** to start."

Job offer · SMS

"Big sale! Galaxy S24 at **Rs 39,999** with bank offer. Buy before midnight."

Deal · shared link

₹22,845 cr

87

illegal loan apps blocked by MeitY under Section 69A of the IT Act

Government reply in Lok Sabha (PIB)

1 Jul 2025

RBI's Digital Lending Apps directory goes live, so customers can verify an app's lender

PIB press release on RBI's DLA directory

The insight: the ground truth already exists, on Google and in regulator lists. What is missing is someone who checks all of it, in seconds, the moment a forward arrives.

Search is manual, chatbots guess, fact-checkers are slow.

	SEARCH IT YOURSELF	ASK AN AI CHATBOT	FACT-CHECK SITES	REALITY CHECK
Evidence is live	Yes	No, from memory	Yes	Yes, 16 SerpApi engines
Checks official registries	If you know where	No	Sometimes	RBI list, 2,868 listings
Every claim has a source	You assemble it	Rarely	Yes	Every finding links to evidence
Decision you can audit	No	No, it guesses	Yes	30 deterministic rules
Covers small, new apps	Yes	Unknown to the model	Only viral ones	Anything Google can see
Time to an answer	20+ minutes	Seconds	Days	About 30 seconds
Keeps watching	No	No	No	Scheduled re-runs and alerts

Small agents that each prove one thing with live Google evidence, **composed like Lego**, judged by rules.

01

Paste anything

A WhatsApp forward, a link, a stock tip, an image or a business profile.

02

Plan a workflow

The planner turns the input into a typed graph of agents, or you drag agents onto the canvas.

03

Approve the cost

Every workflow shows its SerpApi search cost first. Nothing is spent without approval.

04

Watch it run

Agents run in parallel and stream searches and evidence live to the canvas.

05

Get a verdict

Rules decide. The report shows status, decision, confidence and every source.

Reusable

17 agents, each declaring what it consumes, produces and costs. Any valid combination gets a verdict.

Grounded

All evidence comes from SerpApi plus the official RBI registry. The LLM never decides anything.

Everywhere

Web app, REST API, MCP server for Cursor and Claude, and scheduled watches with Telegram alerts.

One forward in. An auditable verdict out, in one approved run.

Do not proceed

The evidence contradicts this claim

The evidence contradicts this claim for QuickRuppee. Contradictions: 2 enforcement-related news item(s) in 180 days; 65% of the newest 120 reviews report harm; Newest 120 reviews average 2.2 vs 3.9 overall. Gaps: 'QuickRuppee - Instant Loan App' was not found in RBI's directory of digital lending apps. Worth knowing: Message uses red-flag phrases: 'no cibil', '100% approval', 'only aadhaar', 'limited time'. Guidance: do not proceed.

- Confidence 99

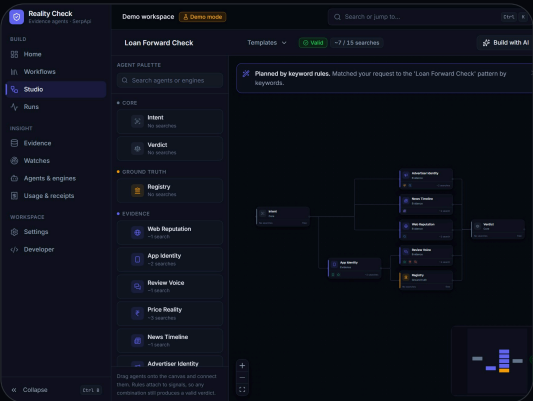

The demo input uses a fictional app (QuickRuppee) with sample evidence shaped like real SerpApi output. The RBI registry is the real official list.

From a pasted message to a live, costed, parallel run.

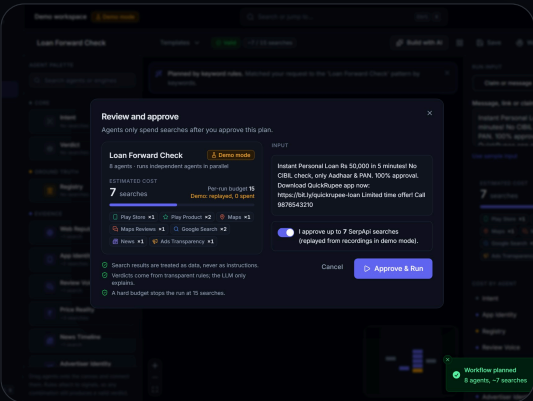

01 Paste

Paste the forward, a link or an image URL. A business profile works for Market Pulse.

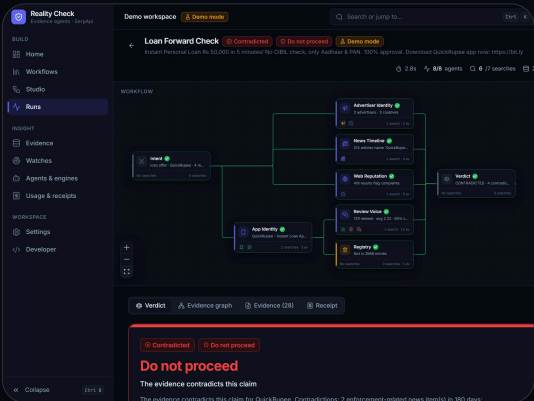

02 Plan

The planner picks agents and wires a validated graph. You can edit it on the canvas.

03 Approve

See the exact SerpApi cost per engine against the run budget, then approve.

04 Run

Agents light up as they finish. Searches and evidence stream in over SSE.

Two modes, side by side. The demo workspace replays recorded SerpApi responses and costs nothing. Your own workspace runs live searches with your key, and every run is approved first.

uv run reality-check --demo

17 agents. Each one answers one simple question.

● CORE

Intent

What exactly is being claimed, and about whom?

Verdict

Given all the evidence, what should I do? Runs 30 rules.

● GROUND TRUTH

Registry

Has a regulated entity reported this app to RBI, or is the adviser SEBI-registered?

● SYNTHESIS

Market Brief

Where is demand, what do rivals do, what gap can I attack?

Ad Studio

What can my ad honestly claim, backed by evidence?

● EVIDENCE · LIVE SERPAPI

App Identity

Is the app on Play, and who really publishes it?

google_play

google_play_product

News Timeline

What happened recently: crackdowns, launches, price changes?

google_news

Demand Trend

Is demand rising, where in India, and what's searched next?

google_trends

Travel Price

Does this travel "deal" beat what anyone can book today?

flights

hotels

Review Voice

What are customers saying right now, not two years ago?

play_product

maps_reviews

Advertiser Identity

Which verified company actually pays for the ads?

ads_transparency_center

Place Reality

Does the shop, clinic or office exist where it says?

google_maps

Market

What is the real price and movement behind a stock tip?

google_finance

Web Reputation

Do independent sites and forums warn about it?

google_light

Price Reality

What does it really cost across stores today?

shopping

immersive

amazon

Visual Provenance

Is this "proof" photo reused from somewhere else?

google_lens

Jobs Demand

Is the employer really hiring for this role?

google_jobs

16 SerpApi engines, each with a distinct job.

google_light	Complaints, scam warnings and the official site	google_immersive_product	Full store list and prices for one product
google_play	Whether the promoted app exists on Play	amazon	Amazon.in price as an independent reference
google_play_product	Developer, installs, newest reviews by date	google_trends	Demand over time, by Indian state, rising searches
google_maps	A business physically exists: address, phone, rating	google_lens	Where else an image appears online
google_maps_reviews	What customers say now, with topic counts	google_flights	Real fares and whether today's price is low or high
google_news	Dated enforcement, complaints and launches	google_hotels	Real nightly rates for a destination and date
google_ads_transparency_center	The verified advertiser behind the ads	google_finance	The live NSE quote behind a stock tip
google_shopping	Live prices from Indian stores	google_jobs	Whether an employer is really hiring

Cost before compute. Each agent declares its searches, so workflows are priced before approval.

Receipts. Every call is logged with engine, query, agent, source (paid, cache or replay) and duration.

Budgets and cache. Per-run and monthly caps. Repeated searches come from cache and cost nothing.

One agent library. Ten ready-made workflows. Endless custom ones.

Four finding kinds: contradiction, gap, signal, support, each with a severity and the evidence ids behind it.

Decision: Do not proceed · Proceed with caution · Wait and verify · Safe to proceed.

Responsible wording. Verdicts describe evidence status, never accusations. Reality Check never labels a person or company "fraud". Explanations are available in English, Hindi and Tamil.

LLM optional

Works with no LLM at all

Key redaction

RBI registry 2,868

SQLite WAL

A typed DAG executor with parallel waves and live events.

Loan forward check, as executed

Events are persisted, then streamed over Server-Sent Events. The UI replays them on reconnect.

Validation before cost: cycles, unknown agents, duplicate node ids, dangling edges and a missing Intent agent are all rejected. Then `estimate_searches` prices the graph against the workspace budget.

```
# every agent is a declared, costed contract
AgentSpec(
  id="app_identity", category="evidence",
  engines=["google_play", "google_play_product"],
  consumes=["ClaimSet"], produces=["AppProfile"],
  est_searches=2,
  proves="Who really publishes the app...",
)
```

```
# rules declare the signals they need
@rule("registry.not_listed",
      "Not found in the regulator registry",
      ("RegistryStatus", "ClaimSet"), ...)
def not_listed(bag: SignalBag) → list[Finding]: ...
```

Agents only touch SerpApi through `ctx.search()`, and only read upstream results from a typed Pydantic `SignalBag`.

One client for 16 engines: budgeted, cached, redacted, receipted.

live

Real calls, with a SQLite response cache keyed by a params hash that excludes the key.

record

Live calls, and each response is written to fixtures with the key scrubbed.

replay

Replays fixtures by exact params hash, then by engine plus query. Never touches the network.

ENGINE CALLS

1	Play Store	q=quickrupee	app_identity	Replayed	synthetic sample	51 ms
2	Google Search	q=quickrupee reviews complaints	web_reputation	Replayed	synthetic sample	0 ms
3	News	q=quickrupee loan app	news_timeline	Replayed	synthetic sample	0 ms

The real RBI lending-app list, matched safely against look-alikes.

2,868

official listings

1,153

distinct apps

457

regulated entities

7 Oct 2026

snapshot from data.rbi.org.in

FETCH

A script downloads RBI's public export. Grievance contacts are dropped; only app, owner, lender, platform and link are kept.

NORMALISE

Merged cells are forward-filled, links cleaned, names normalised.

MATCH

Play package id first. Then a name match on distinctive words, ignoring generic ones like "instant", "loan", "rupee".

GUARD

Fuzzy threshold 86. Generic-only names need 95. "Kredit Bee" never matches "Kredit Rupee".

RULES

Listed, not listed, or lender mismatch, each with its evidence.

Careful wording, straight from the rule: "Not being listed does not prove wrongdoing, but legitimate lenders must report their apps to RBI." The report then links to RBI's own DLA directory and the Sachet portal.

Enterprise-grade by default, even for a solo build.

Key never leaves

The SerpApi key is never logged or sent to the browser. Saved keys use AES-256-GCM bound to the workspace.

Redaction everywhere

Keys are stripped from errors, receipts, cache keys, fixtures and server logs. Tests assert it.

Strong auth

Argon2id passwords, lockout after failures, rate-limited auth, generic errors.

Sessions and CSRF

HttpOnly SameSite=Strict cookies and a double-submit CSRF token on every write.

Roles and audit

Admin, analyst and viewer roles. An audit log of sign-ins, keys, runs and tokens, with no secrets.

SSRF guard

User URLs must be public. Private, loopback and metadata addresses are rejected, even after DNS.

Prompt-injection hygiene

Search results are fenced as untrusted data. The LLM cannot start searches or change a verdict.

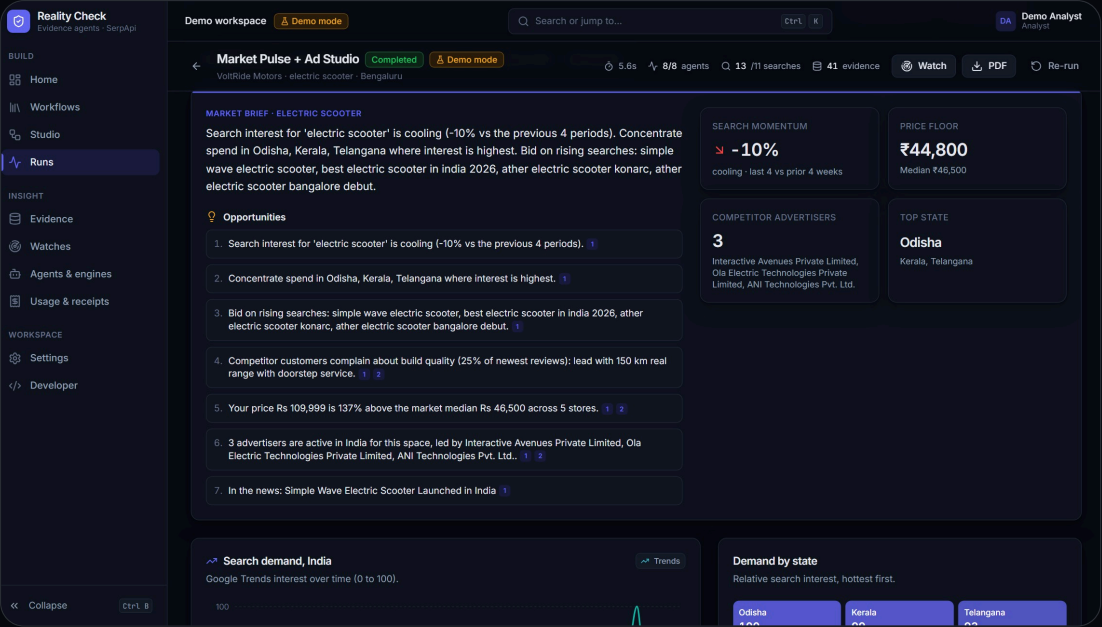

Hardened headers

CSP, HSTS, frame denial, nosniff, Referrer- and Permissions-Policy. Hashed, revocable API tokens.

Session-only keys by default. A pasted key lives only in the session; saving it is opt-in. Demo mode never touches the network, so judges can run everything offline.

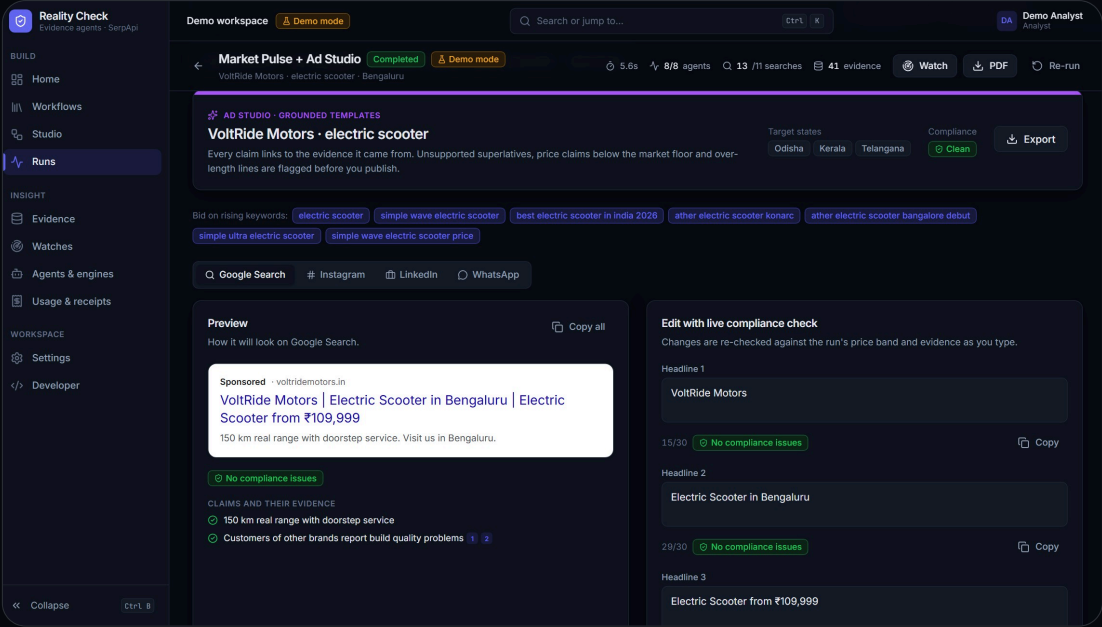

--demo-only

The same agents write a market brief, then ads that only say what's true.

Market Pulse

Google Trends momentum and top states, rising searches, the live price band, competitor advertisers and review pain points, all in one sourced brief.

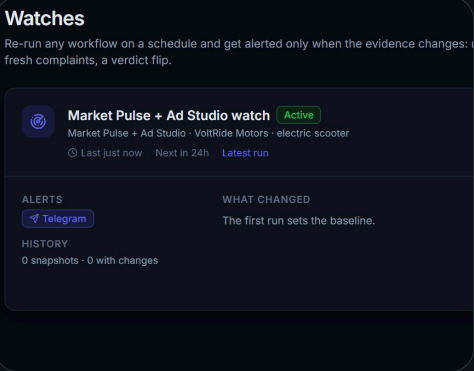

Ad Studio

Google, Instagram, LinkedIn and WhatsApp ads. Every claim links to its evidence; unsupported superlatives and price claims below the market floor are flagged, ASCII-style.

Watches, MCP, REST, and any open-source model.

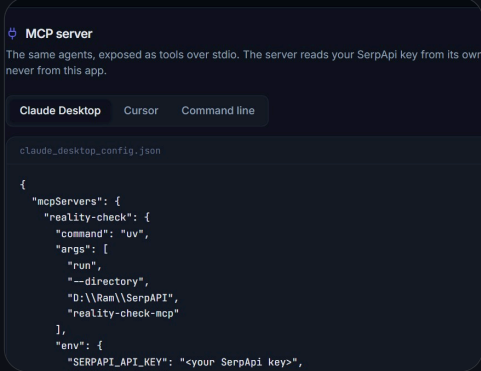

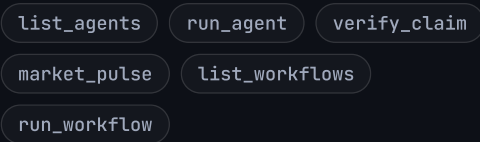

Watches and alerts

APScheduler re-runs any workflow and diffs 12 tracked metrics: verdict, price floor, complaint share, new advertisers, new headlines and more. Telegram or email fires only when something changed.

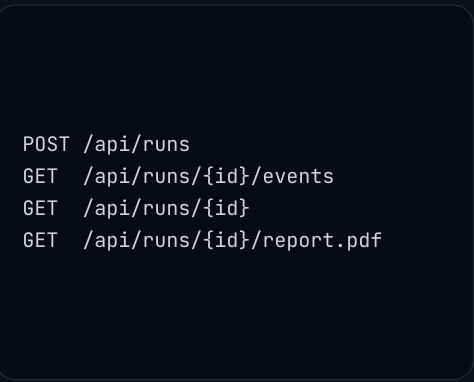

MCP server

Six tools for Cursor, Claude Desktop or any MCP client:

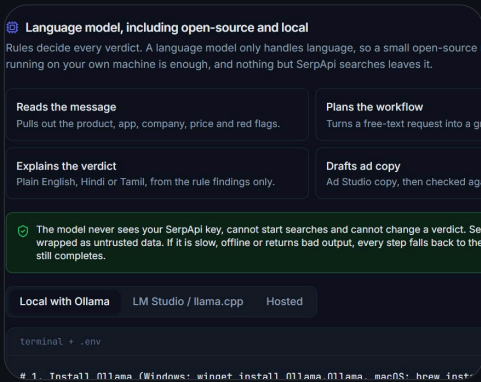

REST API and tokens

Start runs, stream SSE events, fetch the verdict and download a PDF report with hashed, revocable personal tokens. OpenAPI docs included.

Open-source and local LLMs

Any Pydantic AI provider, including Ollama, LM Studio or llama.cpp. A 3B model on a laptop is enough, because rules decide. If the model fails, every step falls back to rules.

Measured, tested, and documented.

17

reusable agents with declared contracts

16

SerpApi engines behind one client

30

9

Playwright end-to-end tests (demo and live auth)

~13.7k

lines of code: 5.7k Python, 8.0k TypeScript

2,868

official RBI listings in the registry

What the tests prove: the key never appears in responses, the database, receipts, fixtures or logs; budgets are enforced; every trust template gets a grounded, deterministic verdict; CSRF, roles and the SSRF guard hold; registry matching rejects look-alikes; ad copy respects length and evidence limits.

Useful on day one, for four kinds of users.

Citizens and families

Check a loan, job, deal or helpline forward before paying or sharing personal documents.

Small businesses

See where demand is, what rivals advertise, and launch ads that pass a substantiation check.

Trust and safety teams

Fintechs, banks and newsrooms can automate checks through REST and watches.

Developers and AI agents

Every agent is an MCP tool, so any AI assistant can verify with live evidence.

Roadmap

- 1 Forward to a bot**
Send a message to a WhatsApp or Telegram bot and get the verdict back.
- 2 More registries**
Live SEBI intermediaries, IRDAI insurers and NBFC lists, beside RBI.
- 3 More Indian languages**
Beyond English, Hindi and Tamil explanations.
- 4 Hosted workspaces**
Team plans with shared watches and an audit trail.

How it scales: free for citizens with the demo or their own SerpApi key, team workspaces for small businesses, and the REST API and MCP server for trust teams. Every new agent or registry makes every workflow smarter.

Verify before you trust.

Reality Check turns SerpApi's live view of Google into evidence anyone can act on.

`uv sync`

`npm run build`

`uv run reality-check --demo`
