Reality Check

Verify before you trust, buy, invest or act.

Reusable SerpApi evidence agents, composed into visual workflows, with verdicts decided by transparent rules.

Every Indian phone gets the same forwards. Nobody checks them at the moment it matters.

"Instant Personal Loan Rs 50,000 in 5 minutes! **No CIBIL check**, only Aadhaar & PAN."

Loan forward · WhatsApp

"This stock will double by Diwali. **Guaranteed returns**, join our premium group."

Stock tip · Telegram

"Work from home, Rs 3,000 a day. Pay a **small registration fee** to start."

Job offer · SMS

"Galaxy S24 at **Rs 39,999** with bank offer. Buy before midnight."

Deal · shared link

₹22,845 cr

reported lost to cyber fraud in 2024, up 206%

MHA, Lok Sabha, Jul 2025

36.4 lakh

financial-fraud incidents reported in 2024

MHA, Lok Sabha, Jul 2025

87

illegal loan apps blocked by MeitY

Govt reply in Lok Sabha (PIB)

Jul 2025

RBI lists lending apps so users can verify the lender

PIB, RBI DLA directory

WHY TODAY'S ANSWERS FAIL

Search it yourself

20+ minutes of tabs. You assemble the sources and still don't check the RBI list.

Ask an AI chatbot

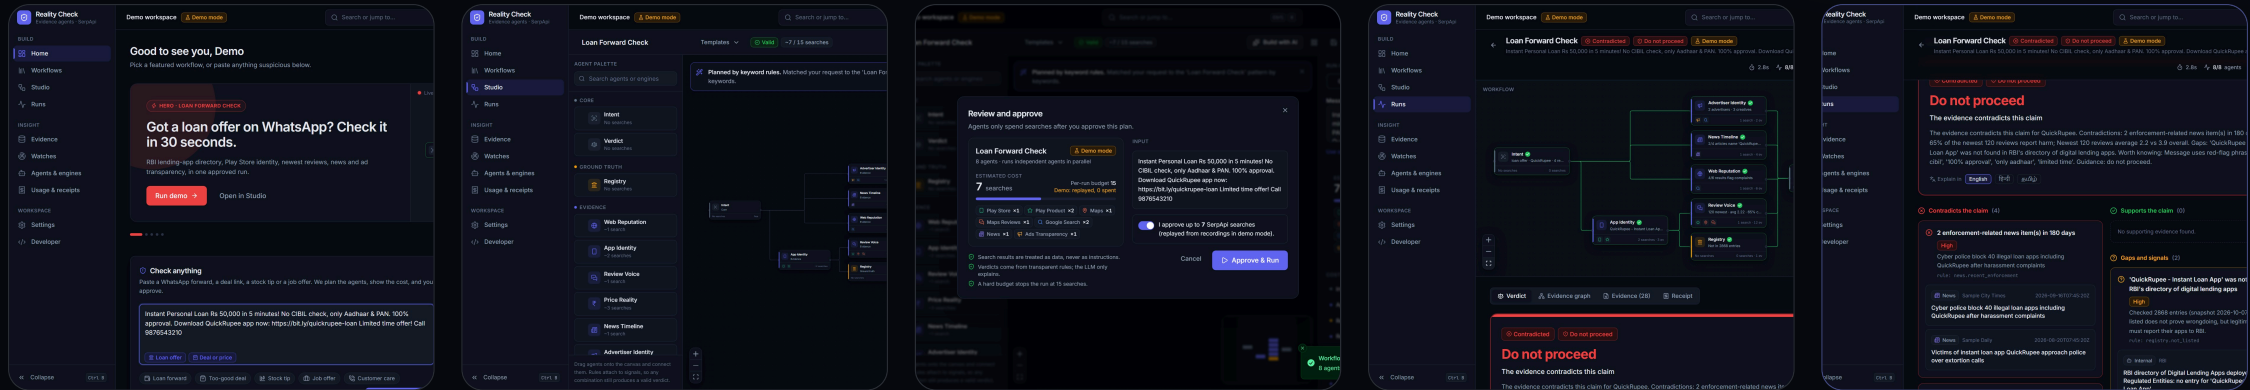

Answers from memory. No sources, and new apps are unknown to the model.

Fact-check sites

Reliable but slow, and they only cover claims that already went viral.

The insight: the ground truth already exists, on Google and in regulator lists. What is missing is something that checks all of it, in seconds, the moment a forward arrives.

Small agents that each prove one thing with live Google evidence, composed like **Lego**, judged by rules.

01 Paste

A forward, link, stock tip, image or business profile.

02 Plan

The planner wires a validated graph of agents. Edit it on the canvas.

03 Approve

See the exact SerpApi cost per engine. Nothing is spent without approval.

04 Run

Agents run in parallel. Searches and evidence stream in live.

05 Verdict

Rules decide. Status, decision, confidence and every source.

Reusable

17 agents, each declaring what it consumes, produces and costs. Any valid combination gets a verdict.

Grounded

All evidence comes from SerpApi plus the official RBI registry. The LLM never decides anything.

Everywhere

Web app, REST API, MCP server for Cursor and Claude, and scheduled watches with Telegram alerts.

One forward in. An auditable verdict out, in one approved run.

Do not proceed

The evidence contradicts this claim

The evidence contradicts this claim for QuickRupee. Contradictions: 2 enforcement-related news item(s) in 180 days; 65% of the newest 120 reviews report harm; Newest 120 reviews average 2.2 vs 3.9 overall. Gaps: 'QuickRupee - Instant Loan App' was not found in RBI's directory of digital lending apps. Worth knowing: Message uses red-flag phrases: 'no cibil', '100% approval', 'only aadhaar', 'limited time'. Guidance: do not proceed.

CONTRADICTED

DO NOT PROCEED

- 1 Not in RBI's lending-app directory
2,868 official listings checked. Legitimate lenders must report their apps.
- 2 65% of the newest 120 reviews report harm
Harassment, hidden charges and fraud, from Play Store reviews sorted by date.
- 3 2 enforcement news items in 180 days
Dated Google News results tagged as enforcement.
- 4 Red-flag phrases
"No CIBIL", "100% approval", "only Aadhaar", "limited time".

8 agents

6 searches

28 evidence items

Confidence 99

The demo input uses a fictional app (QuickRupee) with sample evidence shaped like real SerpApi output. The RBI registry is the real official list.

Reality Check · SerpApi India Hackathon 2026

04 / 10

17 agents. Each one answers one simple question.

● CORE

Intent

What exactly is being claimed, and about whom?

Verdict

Given all the evidence, what should I do? Runs 30 rules.

● GROUND TRUTH

Registry

Has a regulated entity reported this app to RBI, or is the adviser SEBI-registered?

● SYNTHESIS

Market Brief

Where is demand, what do rivals do, what gap can I attack?

Ad Studio

What can my ad honestly claim, backed by evidence?

● EVIDENCE · LIVE SERPAPI

App Identity

Is the app on Play, and who really publishes it?

google_play

play_product

News Timeline

What happened recently: crackdowns, launches, price changes?

google_news

Demand Trend

Is demand rising, where in India, and what's searched next?

google_trends

Travel Price

Does this travel "deal" beat what anyone can book today?

flights

hotels

Review Voice

What are customers saying right now, not two years ago?

play_product

maps_reviews

Advertiser Identity

Which verified company actually pays for the ads?

ads_transparency_center

Place Reality

Does the shop, clinic or office exist where it says?

google_maps

Market

What is the real price and movement behind a stock tip?

google_finance

Web Reputation

Do independent sites and forums warn about it?

google_light

Price Reality

What does it really cost across stores today?

shopping

immersive

amazon

Visual Provenance

Is this "proof" photo reused from somewhere else?

google_lens

Jobs Demand

Is the employer really hiring for this role?

google_jobs

One agent library. Ten workflows. Sixteen SerpApi engines.

WORKFLOW	Registry	App Identity	Review Voice	Web Reputation	News Timeline	Advertiser Identity	Demand Trend	Price Reality	Place Reality	Visual Provenance	Travel Price	Market	Jobs Demand	Market Brief	Ad Studio	Verdict	SEARCHES

Cost before compute

Agents declare their searches, so every workflow is priced and approved before it runs.

Receipts for every call

Engine, query, agent, source (paid, cache or replay) and duration, on every run.

Budgets and cache

Per-run and monthly caps. Repeated searches come from cache and cost nothing.

Rules decide. The LLM only explains. RBI provides the ground truth.

Evidence status

CONTRADICTED

A high contradiction, or 2 or more

UNVERIFIED

One contradiction, a high gap, or open questions

CORROBORATED

2 or more independent supports

INSUFFICIENT

Fewer than 3 evidence items

30 rules return contradictions, gaps, signals and supports, each linked to its evidence.

Confidence, factor by factor

Source independence 25%

Entity match 20%

Ground truth 20%

Agreement 20%

Recency 15%

Explanations in English, Hindi or Tamil. Works with no LLM at all.

The official RBI registry

2,868 1,153 457

listings apps regulated entities

1. Exact Play package id match first.
2. Then distinctive words, ignoring "instant", "loan", "rupee".
3. Fuzzy threshold 86; generic-only names need 95. "Kredit Bee" never matches "Kredit Rupee".

"Not being listed does not prove wrongdoing, but legitimate lenders must report their apps to RBI."

Security built in

Key never logged or sent to the browser

AES-256-GCM saved keys

Argon2id

CSRF

Roles and audit log

SSRF guard

Prompt-injection fencing

Never says "fraud"

Not a prompt chain: a typed, budgeted, fault-tolerant agent runtime.

1 Plan

`plan_workflow()`
An LLM or the rules planner proposes a graph. Invalid LLM output falls back to rules.

2 Validate

`validate_workflow()`
Rejects cycles, unknown agents, duplicate ids, dangling edges and a missing Intent.

3 Price

`estimate_searches()`
Every agent declares its searches. Plans are trimmed to budget, then you approve.

4 Execute

`asyncio.TaskGroup`
Each node starts when its parents finish. 120 s timeout per agent.

5 Search

`ctx.search()`
Cache, budget, then SerpApi. The key is redacted and every call gets a receipt.

6 Decide

30 rules
Findings become status, decision and five-factor confidence.

7 Deliver

SSE · REST · MCP
Events are persisted and replayed on reconnect. Reports export to PDF.

```
# every agent is a declared, costed contract
AgentSpec(
  id="web_reputation",
  engines=["google_light"],
  consumes=["ClaimSet"],
  produces=["ComplaintMentions"],
  est_searches=1,
)
```

```
# rules declare the signals they need
@rule("registry_not_listed", ...,
      ("RegistryStatus", "ClaimSet"))
def not_listed(bag) → list[Finding]
```

```
# the only path to SerpApi: cache, budget, receipt
resp = await ctx.search(
  {"engine": "google_news", "q": q, **INDIA},
  f"Google News: {q}")
```

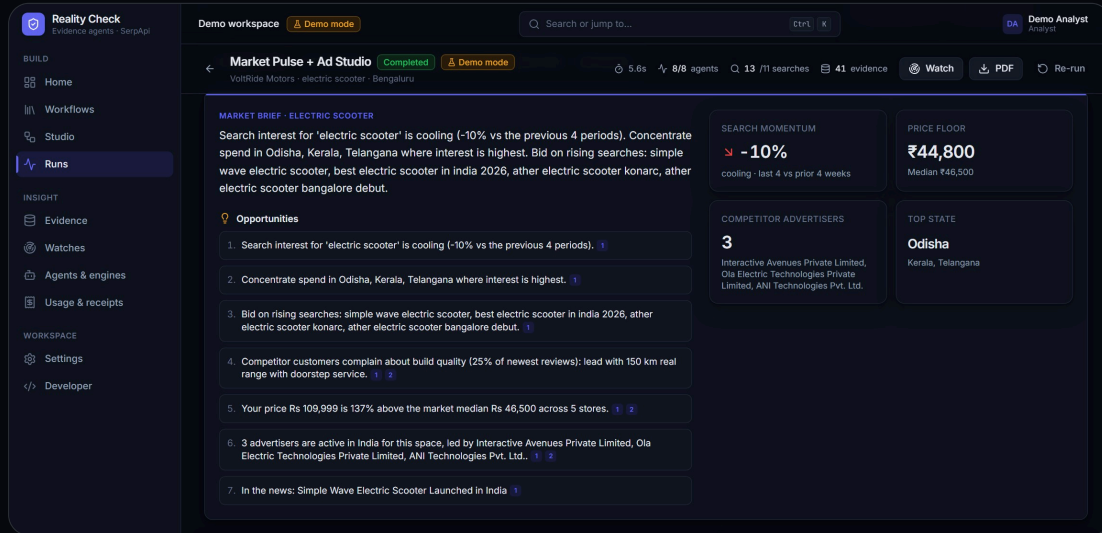

GUARANTEES, ENFORCED IN CODE AND TESTS

- ✓ **Fault-tolerant**
A failed or timed-out agent becomes a recorded gap. The run still finishes, marked completed with gaps.
- ✓ **Deterministic**
Same evidence, same verdict. The LLM writes the explanation from the findings and cannot change them.
- ✓ **Reproducible at zero cost**
Record mode saves SerpApi responses with the key scrubbed. Replay runs offline for demos and tests.
- ✓ **Secret-safe**
The key never leaves the server: redacted from errors, receipts, fixtures and logs, and encrypted at rest.

THE STACK IN SEVEN LAYERS

- L7 **Experience**
React 19 · TypeScript · Vite
- L6 **Interfaces**
FastAPI REST · Server-Sent Events · MCP server (stdio)
- L5 **Trust and security**
Argon2id · CSRF · Roles
- L4 **Orchestration**
Workflow validation · Cost estimate · Topological waves
- L3 **Agents**
AgentSpec contract · Pydantic SignalBag · Evidence graph
- L2 **Reasoning**
30 deterministic rules · 5-factor confidence · Status and decision
- L1 **Evidence and data**
SerpApi gateway: live · record · replay · SQLite cache · Budgets

The same agents power research, grounded ads, alerts and AI tools.

Market Pulse

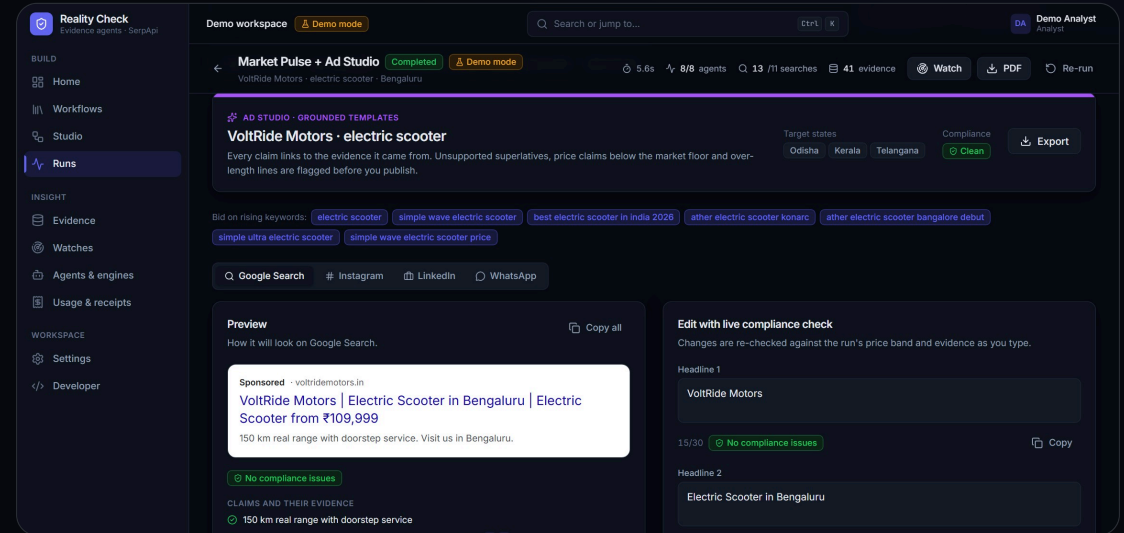

Trends momentum and top states, rising searches, the live price band, competitor advertisers and review pain points in one sourced brief.

Watches

Re-run on a schedule, diff 12 metrics, alert on Telegram or email only when something changed.

MCP server

Six tools for Cursor and Claude: verify_claim, run_agent, run_workflow, market_pulse and more.

Ad Studio

Google, Instagram, LinkedIn and WhatsApp ads. Every claim links to evidence; unsupported superlatives and below-market prices are flagged.

REST API

Start runs, stream SSE, fetch verdicts and PDF reports with hashed, revocable tokens.

Open-source LLMs

Ollama, LM Studio or llama.cpp. A 3B model is enough because rules decide.

Verify before you trust.

Who it's for

Citizens and families check loan, job, deal and helpline forwards before paying.

Trust and safety teams at fintechs, banks and newsrooms automate checks via REST and watches.

Small businesses see demand and rivals, and run ads that pass a substantiation check.

Developers and AI agents call every agent as an MCP tool.

Roadmap

Forward to a bot: WhatsApp or Telegram in, verdict back.

More registries: live SEBI, IRDAI insurers and NBFC lists.

More Indian languages beyond English, Hindi and Tamil.

Hosted team workspaces with shared watches.

Every answer arrives with its **evidence**, its **cost** and its **confidence**.

That is the difference between a chatbot that sounds sure and a reality check you can audit.
